

BISSO LUFESA PERFORMS PLATFORM INSPECTION

ZORRITOS, Peru (May 14, 2009) – Bisso Lufesa, a full-service marine contractor, successfully performed a platform inspection for BPZ Energy off the coast of Northwest Peru.

The Bisso Lufesa crew spent about a month aboard the dive support vessel DSV CABALLO DE TRABAJO inspecting the 4-pile production platform in 208 feet of water about five miles off the coast.

Divers performing the Level II inspection checked for excessive marine growth, damaged welds, corroded structural members, decay, wall thickness, cathodic protection and other conditions affecting the production platform.

The DSV CABALLO DE TRABAJO was outfitted with two complete deep-air and mixed-gas diving systems. The vessel, which is four-point moored, also was outfitted with a 10-ton hydraulic crane and a 40,000 psi water blaster.

Bisso Lufesa is a full-service marine contractor providing services to the maritime, shipping, salvage and offshore energy industries. Headquartered in Lima, Peru, Bisso Lufesa combines the expertise, resources and experience of Bisso Marine, founded in 1890, and Lufesa Divers, founded in 1992. Services include diving, offshore construction, port operations, salvage and firefighting, pumping and lightering, pollution response and marine transportation.
